

Overview

Installation tips

1. Mark out the course of the safety fence installation with a control line.
2. Erect the post and attach the safety fence (do not tighten the screws), and position the fence along the control line.
3. Start with a corner or a door, line the panel up with the control line and drill the floor fixing holes through the feet.
4. Insert the bolts and screw the posts to the floor.
5. Check the posts with a spirit level and adjust with washers under the feet if necessary.
6. Screw the safety fence panel securely to the posts.

Tools required:

- Control line
- Tape measure
- Hammer drill with $\varnothing 12$ mm drill bit
- Hammer
- 13 mm Spanner
- 5 mm Hexagon socket wrench
- Spirit level
